

# CORONAVIRUS, FLU, COLD?

As the number of coronavirus cases rise, some key differences set coronavirus apart from the seasonal flu and the common cold — mainly the intensity of the symptoms and the recovery period. A guide at identifying the differences in the three conditions All three, however, are spread by air-borne respiratory droplets and contaminated surfaces

CORONAVIRUS	SEASONAL FLU	COMMON COLD
Onset: Sudden	Onset: Abrupt	Onset: Gradual
<b>Symptoms</b> <ul style="list-style-type: none"> <li>▪ Fever</li> <li>▪ Dry cough</li> <li>▪ Muscle ache</li> <li>▪ Fatigue</li> </ul> <b>Less common symptoms</b> <ul style="list-style-type: none"> <li>▪ Headache</li> <li>▪ Coughing up blood (haemoptysis)</li> <li>▪ Diarrhoea</li> </ul>	<b>Symptoms</b> <ul style="list-style-type: none"> <li>▪ Fever</li> <li>▪ Dry cough</li> <li>▪ Muscle ache</li> <li>▪ Headache</li> <li>▪ Sore throat</li> <li>▪ Runny or stuffy nose</li> </ul> <b>Less common symptoms</b> <ul style="list-style-type: none"> <li>▪ Diarrhoea</li> <li>▪ Vomiting</li> </ul>	<b>Symptoms</b> <ul style="list-style-type: none"> <li>▪ Runny or stuffy nose</li> <li>▪ Sneezing</li> <li>▪ Sore throat</li> </ul> <b>Less common symptoms</b> <ul style="list-style-type: none"> <li>▪ Low grade fever</li> <li>▪ Muscle or body ache</li> <li>▪ Headache</li> <li>▪ Fatigue</li> </ul>
<b>Incubation:</b> <b>1-14 days,</b> may go up to 24 days	<b>Incubation:</b> <b>1-4 days</b>	<b>Incubation:</b> <b>2-3 days</b>
<b>Complications:</b> <b>5% cases</b> (acute pneumonia, respiratory failure, septic shock, multiple organ failure)	<b>Complications:</b> <b>1% cases</b> (including pneumonia)	<b>Complications:</b> <b>Extremely rare</b>
<b>Recovery:</b> <b>2 weeks</b> (mild cases); 2-6 weeks (severe cases)	<b>Recovery:</b> <b>1 week</b> (mild cases); 2 weeks (severe cases)	<b>Recovery:</b> <b>1 week</b> for most cases; may last as long as 10 days
<b>Treatment or vaccine</b> No vaccines or anti-viral drugs available; only symptoms can be treated	<b>Treatment/vaccine</b> An annual seasonal flu vaccine is available	<b>Treatment/vaccine</b> No treatment, but doctors advise treating symptoms

## SEVEN KINDS OF CORONA

Seven strains of coronavirus (CoV) that infect humans have been identified. These cause illness ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS-CoV).

### Harmless

- Serotype 229E
- Serotype OC43
- Serotype NL63
- Serotype HKU1

These cause symptoms of the common cold, and rarely cause severe pneumonia.

### Dangerous

These are known to cause more severe disease. These are:

1. Sars-CoV which causes severe acute respiratory syndrome (Sars)
2. Mers-CoV that causes Middle East respiratory syndrome (Mers)
3. Sars-CoV2 that causes coronavirus disease (Covid-19)

## The unknowns of Sars-CoV2

Sars-CoV2 is closely related (with 80% identity) to two bat-derived Sars-like coronaviruses (bat-S-CoV-2a/CoVZ13 and bat-SL-CoVZ13) collected in 2018 in Zhouhan, eastern China.

It has 79% genetic affinity with Sars-CoV, 50% with Mers-CoV

The Sars-CoV receptor-binding domain structure, which allows a virus to latch on to and enter a cell, is similar to Sars-CoV, despite amino acid variation at some key residues. Little is known about Sars-CoV2, studies on Sars-CoV provide clues to its behaviour and ability to infect.

On smooth surfaces such as tables, phones etc., Sars-CoV retains its viability for 5 days at 22-25°C and relative humidity of 40-50%, which is typical for air-conditioned rooms. Though this may vary for Sars-CoV2, experts say this is a good indicator for its behaviour.
